

Indoor Plant Care

Feeding and care is very important to indoor plants. Follow these helpful guides to make your indoor plants a success.

- Feed every 2-3 weeks with *Organisol*, fish emulsion or 3:1:6 plant food
- Mix the fertiliser in a water can and pour it (gently) over soil in the pot
- Clean the leaves of the plant with wet wipes every 1-2 months to keep them dust free
- When re-potting, use a good potting soil and water with *Kelpak* to assist the plant in recovering
- Plants hate having wet feet so empty the drip tray after watering to avoid standing water
