

Pansies

Pansies are hardy annuals which love sunny spots. Many hybrids have been introduced, flowering in winter and early spring. They make for excellent winter colour, jazzing up those dull days.

Here a few tips to keep your garden alive with colourful pansies:

- Plant pansies in well-fertilized soil enriched with good compost/manure
- Remove dead flowers immediately to promote continual flowering
- Water pansies well in dry weather and remember to check for aphids
