

## Rock Dust

**Volcanic Rock Dust revitalises the soil and can be put on anything that grows, all year round.**

Consisting of 72 minerals and trace elements, it is 100% natural, non-toxic and eco-friendly. Rock Dust supplies elements lacking in regular fertilizers and composts. And even if used in excess, it does not burn plants.

Some benefits include:

- Increases root development and nutrient uptake of plants, therefore lowering the amount of water required
- Stimulates soil microbial and earthworm activity
- Makes minerals and trace elements readily available
- Revitalises existing plants and trees
- Increases resistance to disease, insects, fungus, frost and drought
- Increases quality, health and vigour of plants
- Speeds up the composting process and increases its biotic-mineral content

Rock Dust is stocked at Starke Ayres Garden Centre.
