

Citrus Woolly Whitefly

1/3 methylated spirits

2/3 water

Kombat Ants/ Kombat Fruitfly

Wetting agent (Efekto Insure pH Buffer, wetter and spreader)

Hose down the tree with a strong jet of water, especially under the leaves.

Spray plants, alternating between Kombat Ants and Kombat Fruitfly, ensuring a good coverage of the leaves.

After a couple of days squirt the underside of the leaves with a strong jet of water again.

Repeat spray every 7-10 days until all traces of the woolly whitefly are gone. If honeydew is still present the whitefly is still active.

After the whitefly has been successfully treated spray monthly with Rape oil, Pyrol or Oleum to protect the tree with an oily residue.

Feed and water the trees regularly with:

Magnesium sulphate – 75g (approx. 1 handful) per square metre every 2 months.

Kompel 3:1:5 Organic - 1 handful per square metre every 6-8 weeks OR

Bounce Back – 2 handfuls per square metre every 6-8 weeks OR

Talborne Organics 3:1:5 – 1 handful per square metre every 3-4 months.
