

HOW TO PLANT A TREE OR SHRUB

PLANTING:

- Make a big enough hole, double the size of the container it is currently in
- Mix the soil with a generous amount of compost adding Bonemeal, Golddust and a water-retaining agent (Stockosorb, Palm Peat, Vermiculite, Perlite or XXL Gel)
- Place a Zeolite plant discs at the base of the hole
- Plant the tree with the soil at the same height as it was in the container
- Compress the soil well around the root ball
- Drench with Kelpak: 23ml/litre.

WATERING:

- Drench the plant twice a week in Summer
- Improve absorption and water retention by applying Waterwise 3D and FloSTIM

FEEDING:

- Fertilise your tree or shrub every 6 – 8 weeks with Starke Ayres Organic 3:1:5, Wonder 8:1:5 or Atlantic Bio Ocean

MAINTENANCE:

- Inspect your tree regularly for plant diseases or insect infestation and treat immediately on observation. For the correct treatment consult our qualified horticultural team.
