

HOW TO PLANT A TREE OR SHRUB

- PLANTING:**
- Make a big enough hole, double the size of the container it is currently in
 - Mix the soil with a generous amount of Compost adding Bonemeal and Starke Ayres Hydrocache as a water-retaining agent
 - Plant the tree with the soil at the same height as it was in the container
 - Compress the soil well around the root ball
 - Drench with Kelpak: 25ml/litre which will improve root, shoot and flower development

WATERING:

- Drench the plant twice a week in Summer
- Improve absorption and water retention by applying Waterwise 3D and FloSTIM

FEEDING:

- Fertilise your tree or shrub every 6 – 8 weeks with Starke Ayres Organic 3:1:5, Wonder 8:1:5 or Atlantic Bio Ocean

MAINTENANCE:

- Inspect your tree regularly for plant diseases or insect infestation and treat immediately on observation. For the correct treatment consult our qualified horticultural team.
